SUMMARY

Drexel CS graduate with fullstack experience (React, Angular, .NET, Node.js) who shipped two deployed 2026 projects: a full-stack app with CI/CD and Claude API integration, and a RAG system with hybrid retrieval and automated evaluation. Seeking a Junior Software Engineer role to bring the same ownership to a collaborative team.

EDUCATION

Drexel University

Bachelor of Science in Computer Science

Philadelphia, PA

Sept. 2020 – June 2025

EXPERIENCE

Project Coordinator

November 2025 – Present

Danella Companies

Philadelphia, PA

- Prepare cost estimates for utility infrastructure projects ranging from \$100K to \$1M, including contracts with PECO.
- Coordinate daily logistics for 15+ active crews, compiling assignments, locations, and contacts into structured morning reports.

Fullstack Software Engineer

October 2023 – March 2024

National Board of Medical Examiners

Philadelphia, PA

- Served as Scrum Master for a 10-person engineering team in an Agile environment, facilitating 30+ sprint stand-ups and retrospectives that improved sprint delivery and team communication.
- Delivered an interactive data table feature using Angular, enabling advanced filtering/sorting that improved system monitoring capabilities.
- Deployed a static web application to AWS S3, configuring bucket hosting and access policies for public delivery.

Fullstack Software Engineer

September 2022 – March 2023

Customized Energy Solutions

Philadelphia, PA

- Triaged and resolved 25–30 SQL tickets per week in a live production environment using Jira, demonstrating reliability and analytical problem-solving under business pressure.
- Designed and shipped a C# microservice following object-oriented design principles, using Bitbucket for version control and enabling cross-team collaboration on a shared codebase.
- Built and maintained database automation scripts across MySQL and SQL Server, reducing recurring job failures and improving data pipeline reliability.

PROJECTS

JustTracks | C#, .NET, JavaScript, Docker, xUnit, Claude API | [Live](#) | [GitHub](#)

April 2026 – July 2026

- Built a full-stack project management app with .NET 10, EF Core, and PostgreSQL, exposing a RESTful API with 15+ endpoints across 3 controllers, full CRUD, and a drag-and-drop Kanban frontend.
- Implemented JWT authentication with BCrypt hashing, claims-based data scoping, and role-based authorization enforcing 5 permission checks (401/403/404/409) on multi-user project membership.
- Integrated the Anthropic Claude API via a secured backend endpoint to auto-generate task descriptions in under 2 seconds, with API-key management through .NET user-secrets.
- Containerized the app with Docker multi-stage builds, cutting image size 70% (SDK→runtime), backed by a GitHub Actions CI pipeline running 9 xUnit tests on every push.

ShanghaiRAG | RAG, Python, FastAPI, Hybrid Search, BM25 | [Live](#) | [GitHub](#)

July 2026 – August 2026

- Engineered end-to-end RAG pipeline (4 source docs, 633 chunks) using PyMuPDF extraction, sentence-transformers embeddings, and ChromaDB, with hybrid dense+BM25 retrieval and cross-encoder reranking
- Built RAGAS evaluation suite (18 golden Q&As) measuring faithfulness, answer correctness, and context precision; diagnosed retrieval as the system's bottleneck (0.91 faithfulness vs. 0.30 context precision)
- Deployed public FastAPI + Streamlit app on Render with caching, rate limiting, and model tuning (Claude Haiku) that cut inference cost ~5x

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, C++, C#, C, HTML/CSS, SQL

Frameworks: .NET, ASP.NET Core, Entity Framework Core, React, Angular, Node.js, FastAPI, TailwindCSS

Tools: Git, Docker, GitHub Actions, CI/CD, xUnit, Claude API, RAG/Hybrid Search, ChromaDB, RAGAS, PostgreSQL, MongoDB, MySQL, SQL Server, JWT, Jira, Agile/Scrum, AWS (S3), VS Code
